

## **IN THE CLAIMS**

1. (Previously Presented) A method of displaying on a computer information regarding values associated with a plurality of geographic locations including the steps of:

- a) receiving a request for information regarding a first geographic area including the plurality of geographic locations, wherein the plurality of geographic locations are street addresses;
- b) receiving a plurality of values each associated with one of the plurality of geographic locations, wherein said plurality of values are price values;
- c) associating each of a plurality of symbols with each of the plurality of geographic locations based upon the associated value of said each of the plurality of geographic locations;
- d) displaying a map of the first geographic area in response to said step a) on a display; and
- e) displaying each of the plurality of symbols on the map at its associated geographic location in response to said step a) on the display.

2. (Original) The method of Claim 1 wherein said steps b) and c) are performed prior to said step a).

3. (Cancelled)

4. (Previously Presented) The method of Claim 1 wherein the values are rental values.

5. (Original) The method of Claim 1 further including the steps of:  
prior to said step a), displaying a list of a plurality of geographic areas, including the first geographic area.

6. (Original) The method of Claim 1 wherein the plurality of symbols each include a different shape.

7. (Original) The method of Claim 6 wherein the plurality of symbols each include a different color.

8. (Currently Amended) The method of Claim 1 further including the steps of:

f) associating each of the plurality of symbols with a different range of values wherein each of the plurality of symbols has first visually identifying characteristic indicating one of a plurality of ranges of the values and a second visually identifying characteristic indicating a subrange within its associated range; and

g) associating each of the plurality of symbols based upon said steps c) and f) wherein the value of each geographic location corresponds to the range and subrange indicated by the symbol associated with the geographic location.

9. (Original) The method of Claim 8 wherein each of the symbols has an associated color and an associated shape.

10. (Original) The method of Claim 9 wherein a magnitude of the ranges vary among the plurality of symbols.

11. (Original) The method of Claim 1 further including the steps of:

f) associating each of a plurality of colors with one of a plurality of ranges of the values;

g) associating each of a plurality of shapes with one of a plurality of subranges within each of the plurality of ranges of the values, each symbol including one of the plurality of colors and one of the plurality of shapes, wherein a magnitude of the plurality of subranges varies among the symbols;

h) associating each of the plurality of symbols based upon said steps c), f) and g).

12. (Original) The method of claim 11 wherein the subranges for symbols associated with a higher-value color are larger in magnitude than symbols associated with a lower-value color.

13. (Original) The method of Claim 1 further including the step of:

displaying a legend indicating the values associated with each of the plurality of symbols.

14. (Original) The method of Claim 1 further including the step of:

displaying an advertisement based upon said step a).

15. (Original) The method of Claim 1 further including the steps of:

f) receiving a request for additional information for a selected one of the plurality of geographic locations;

g) displaying the additional information based upon said step f).

16. (Cancelled)

17. (Cancelled)

18. (Currently Amended) The method of Claim 1 wherein each of the plurality of values is associated with a street address, said method further including the steps of associating each of the plurality of values with a latitude and longitude and displaying each of the symbols on the map based upon the associated longitude and latitude.

19. (Previously Presented) A computer system for displaying information regarding values associated with a plurality of locations comprising:

- a) an input device for selectively generating a request for information regarding a geographic area;
- b) a database of a plurality of values each associated with one of the plurality of locations in the geographic area, each of a plurality of symbols associated with each of the plurality of locations based upon the values, wherein said plurality of values are price values and said plurality of locations are street addresses; and
- c) a display displaying a map of the first geographic area and each of the plurality of values at the associated locations on the map in response to said request from said input device.

20. (Cancelled)

21. (Original) The computer system of Claim 19 wherein the values are rental values.

22. (Original) The computer system of Claim 19 wherein the display displays a list of a plurality of geographic areas, including the first geographic area, the input device selecting the first geographic area from the list.

23. (Original) The computer system of Claim 19 wherein the plurality of symbols each include a different shape and a different color.

24. (Previously Presented) The computer system of Claim 19 wherein each of a plurality of colors is associated with one of a plurality of ranges of the values, and each symbol includes a different one of the plurality of colors, each of the plurality of symbols associated with the plurality of locations based upon the associated colors and values.

25. (Currently Amended) A computer system for creating a map comprising:  
a map program associating each of a plurality of geographic locations in a geographic area with  
a map location, wherein said geographic locations are street addresses;  
a value database of a plurality of values each associated with one of the plurality of geographic  
locations, wherein said plurality of values are price values;  
a plurality of symbols, each associated with at least one of the plurality of values ~~wherein each~~  
~~of the plurality of symbols has a first visually identifying characteristic indicating one of a plurality~~  
~~of ranges of the values and a second visually identifying characteristic indicating a subrange within~~  
~~its associated range;~~  
a computer programmed to associate each of the plurality of symbols with each of the plurality  
of map locations in the map program based upon the associated value in the value database for the  
associated geographic location; and  
a display displaying a map image of the geographic area and each of the plurality of symbols at  
the associated map locations.

26. (Cancelled)

27. (Previously Presented) The computer system of Claim 25 wherein each of a plurality  
of colors is associated with one of a plurality of ranges of the values, and each symbol includes a  
different one of the plurality of colors, each of the plurality of symbols associated with the plurality  
of locations based upon the associated colors and values.

28. (Currently Amended) A method for creating a map image in a computer including the steps of:

a) receiving a plurality of values each associated with one of a plurality of geographic locations in a geographic area, wherein said plurality of values are price values and said plurality of geographic locations are street addresses;

b) associating each of a plurality of symbols with at least one of the plurality of values, wherein each of the plurality of symbols has a first visually identifying characteristic indicating one of a plurality of ranges of the values and a second visually identifying characteristic indicating a subrange within its associated range;

c) associating each of the plurality of geographic locations with a map location on a street map image;

d) associating each of the plurality of symbols with each of the plurality of map locations based upon the associated values;

e) generating the map image of the geographic area including the plurality of symbols each at their associated map locations.

29. (Original) The method of Claim 28 further including the steps of:

f) receiving a request for information regarding the geographic area;

g) displaying a map of the first geographic area in response to said step a); and

h) displaying each of the plurality of symbols on the map at its associated location in response to said step a).

30. (Original) The method of Claim 28 wherein said steps c) and d) are performed after said steps a) and b).

31. (Cancelled)

32. (Previously Presented) The method of Claim 28 further including the steps of:

- f) associating each of a plurality of shapes with one of a plurality of ranges of the values, each symbol including a different one of the plurality of shapes;
- g) associating each of the plurality of symbols based upon said step f).

33. (Original) The method of Claim 32 further including the step of:  
displaying a legend indicating the values associated with each of the plurality of symbols.

34. (Previously Presented) The method of Claim 28 wherein each of the plurality of values is associated with a street address.

35. (Previously Presented) The method of claim 1 wherein each of the plurality of symbols is different in appearance.

36. (Previously Presented) The method of claim 35 wherein said step c) further includes the step of assigning each of the plurality of symbols to more than one of the plurality of geographic locations based upon the associated values.

37. (Previously Presented) The computer system of claim 19 wherein each of the plurality of symbols is different in appearance.

38. (Previously Presented) The computer system of claim 37 wherein said each of the plurality of symbols is associated with more than one of the plurality of locations based upon the associated values.

39. (Previously Presented) The computer system of claim 25 wherein each of the plurality of symbols is different in appearance.

40. (Previously Presented) The computer system of claim 39 wherein said each of the plurality of symbols is associated with more than one of the plurality of locations based upon the associated values.

41. (Previously Presented) A method of displaying on a computer information regarding values associated with a plurality of geographic locations including the steps of:

- a) associating each of a plurality of symbols with one of a plurality of geographic locations based upon associated values of the geographic locations, each of the plurality of symbols having first visually identifying characteristic indicating one of a plurality of ranges of the values and a second visually identifying characteristic indicating a subrange within its associated range, the value of each geographic location corresponding to the range and subrange indicated by the symbol associated with the each geographic location;
- b) receiving a request for information regarding a first geographic area including the plurality of geographic locations;

- c) displaying a map of the first geographic area in response to said step b);
- d) displaying each of the plurality of symbols on the map at its associated geographic location in response to said step b).

42. (Previously Presented) The method of Claim 41 wherein one of the first visually identifying characteristic and the second visually identifying characteristic is shape.

43. (Previously Presented) The method of Claim 42 wherein the other of the first visually identifying characteristic and the second visually identifying characteristic is color.

44. (Previously Presented) The method of Claim 41 wherein at least one of the first visually identifying characteristic and the second visually identifying characteristic is color.

45. (Previously Presented) A method for creating a map image in a computer including the steps of:

- a) receiving a plurality of values each associated with one of a plurality of geographic locations in a geographic area;
- b) associating each of a plurality of symbols with one of the plurality of geographic locations based upon the value associated with the geographic location;

- c) associating each of the plurality of geographic locations with a map location on a street map image;
- d) associating each of the plurality of symbols with each of the plurality of map locations based upon the associated values; and
- e) generating the map image of the geographic area including the plurality of symbols each at their associated map location, each of the plurality of symbols having first visually identifying characteristic indicating one of a plurality of ranges of the values and a second visually identifying characteristic indicating a subrange within its associated range, the value of each geographic location corresponding to the range and subrange indicated by the symbol associated with the geographic location.

46. (Previously Presented) The method of Claim 45 wherein at least one of the first visually identifying characteristic and the second visually identifying characteristic is shape.

47. (Previously Presented) The method of Claim 46 wherein at least one of the first visually identifying characteristic and the second visually identifying characteristic is color.

48. (Previously Presented) The method of Claim 45 wherein at least one of the first visually identifying characteristic and the second visually identifying characteristic is color.

49. (New) The method of claim 41, wherein a magnitude of the subranges varies among the symbols.

50. (New) The method of claim 45, wherein a magnitude of the subranges varies among the symbols.
